# **High Tack Fish Glue**

### **Application Methods**

Surface may be coated by roller coat, knife coat or brush coat.

#### **Applications**

- 1. As an additive to adhesive formulations in the manufacture of remoistenable gummed paper packaging tapes.
- 2. Wood gluing when long open times are needed for assembly operations.
- 3. Paper bonding of heavy grade box board in packaging.
- 4. Bonding of manila paper for identification tag manufacturing.
- 5. As a water based leather finish.
- 6. Any application where it is desirable to supply an adhesive coated surface which is to be re-activated much later by simple water remoistening.

#### Advantages

- 1. High initial tack when first coated or when remoistening the dry adhesive film.
- 2. Slow setting for wood bonding applications when open times are desirable.
- 3. Good solvent resistance.
- 4. Excellent heat resistance.
- 5. Easily thinned and cleaned up with water.

#### **Properties**

An organic fish glue with high initial tackiness. Once coated and allowed to dry, High Tack Fish Glue has excellent remoistening properties. This allows for easy re-activation of adhesive by water at a later time for bonding. High Tack Fish Glue has good solvent and heat resistance but poor water resistance.

Color	Light Caramel
Temperature Range	-30°F to +500°F
Time to Tack	1 Minute
Open Time	1.5 to 2 Hours
Viscosity	Medium brush on (4000 cps)
Storability	Excellent (Freeze-Thaw Stable)
Flammability	Non-Flammable
Shear Strength	3200 PSI with 50% wood failure (ASTM D 905)

**Cold Bonding** - While adhesive films are still wet materials should be bonded and maintained under pressure until adhesive sets. Suggested clamping time for wood, 12 hours.

**Re-activation** - Surfaces coated with High Tack Fish Glue and allowed to dry may be readily re-activated by a light coat of water. The remoistened surface develops immediate tack and may be bonded to many surfaces including steel, glass and wood.

**Adhesive Additive** - Gummed paper tape - It is recommended that 10% be added to the basic adhesive formulation to obtain maximum tack retention and cold water remoistening properties. A 5% addition would be a minimum recommendation.

**Leather Finishing** - High Tack Fish Glue has very high leather pigment suspending power, good gloss and excellent heat resistance. A small addition to leather finishing solutions, depending on the formulation, is all that is required.

#### **SOLVENTS:**

Thinning - water Clean up - water

Available in 1 quart bottles -12 per case, 1 gallon pails - 4 per case, 5 gallon pails and drums.
